

Structural Engineer

Job Type: Full-Time, Permanent

Are you a recent **civil or structural engineering grad** looking to make a real impact right from the start?

At **Kassian Dyck & Associates**, we believe great engineers are built through mentorship, meaningful work, and a supportive team. Based in **Calgary**, we're a tight-knit group of structural engineers designing **precast concrete systems** across North America — from high-end architectural cladding precast, hockey arenas, football stadiums, data centers, industrial buildings and other specialty structures.

We're growing and looking for a **Structural Engineer** who's ready to contribute, learn, and take real steps toward becoming a confident, well-rounded P.Eng.

What You'll Do (and Learn)

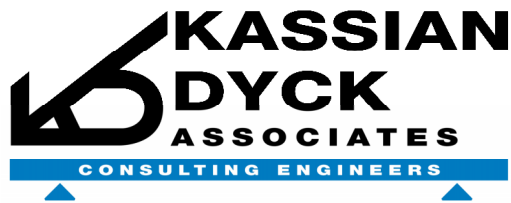

In this role, you'll be exposed to a broad range of precast structural systems and applications. You'll:

- Support design work for:
 - **Precast walls, slabs, columns, and beams** for industrial and commercial mixed-use structures.
 - **Precast seating for football and soccer stadiums** and **hockey arenas**
 - **Architectural cladding** on commercial and institutional buildings
- Perform engineering calculations and assist with structural analysis
- Learn how to develop, review, and coordinate precast shop drawings and erection plans
- Work closely with project engineers, designers, and BIM drafters to bring ideas to life in 3D models
- Attend internal reviews and external project meetings with contractors and architects
- Visit construction sites to see how design decisions translate in the field
- Build the skills, experience, and confidence needed to earn your **P.Eng. designation**

Who You Are

- A recent or upcoming **graduate in Civil Engineering (with Structural Engineering focus)**
- Actively pursuing your **EIT and P.Eng.** with a desire to grow into a licensed engineer
- Curious, reliable, and motivated to take ownership of your development
- Strong communicator and team player with a positive, solution-oriented attitude

Kassian Dyck & Associates
resumes@kdassociates.com

- Comfortable with (or eager to learn) structural software like ETABS, SAFE, Robot, Smath, or Tekla
 - Excited to work **in-office in Calgary**, where we collaborate and grow together
-

Why Start Your Career Here

We know that your first few years in the industry matter. That's why we focus on giving engineers:

- **Real Responsibility:** You'll be part of project teams from the start
 - **Daily Mentorship:** Learn directly from senior engineers who want to see you succeed
 - **Clear Career Path:** Grow toward project engineer and beyond, at a pace that fits your goals
 - **Meaningful Projects:** Shape the built environment through high-profile precast work across Canada and the U.S.
-

What We Offer

- **Competitive salary – \$60K – \$80K**
- **Extended health, dental, vision, and life insurance**
- **RRSP matching to help you plan ahead**
- **Paid time off and holidays**
- **Casual dress and regular team events**
- **On-site parking at our Calgary office**
